Subject: FINAL PROJECT REPORT

Hospital Management System

Project Overview:

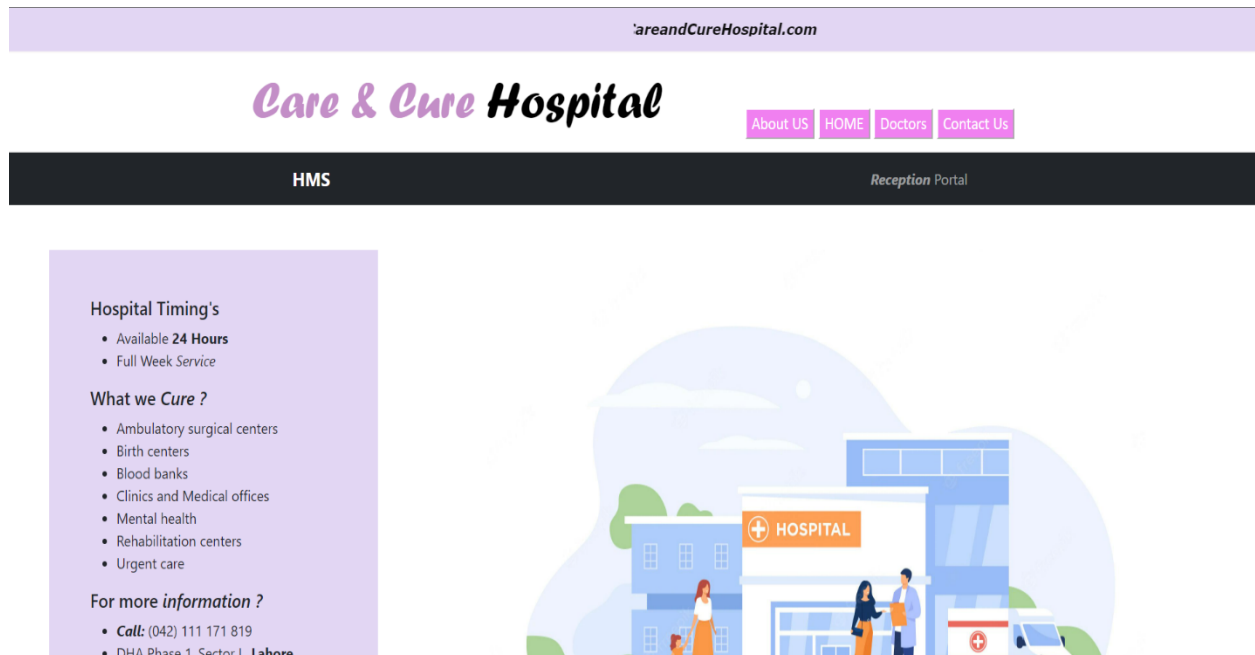

Hospital Management System is a Hospital website where a patient can place his/her appointment. Patient has to give detail about his/her self and the illness which he/she is suffering from. Highly Qualified Doctors are available to cure. There is a particular doctor for particular department. After registration He/she go to the consultant doctor, Doctor check him/her. In order to take tests of patient, the patient will be taken to the Lab for tests, and then after tests, the report sent to the Consultant Doctor. If needed Consultant doctor call the junior doctor to checkup the particular Patient. After that the Patient will be go to ward for further treatment and will be entertained by Nurse.

Project Deliverables:

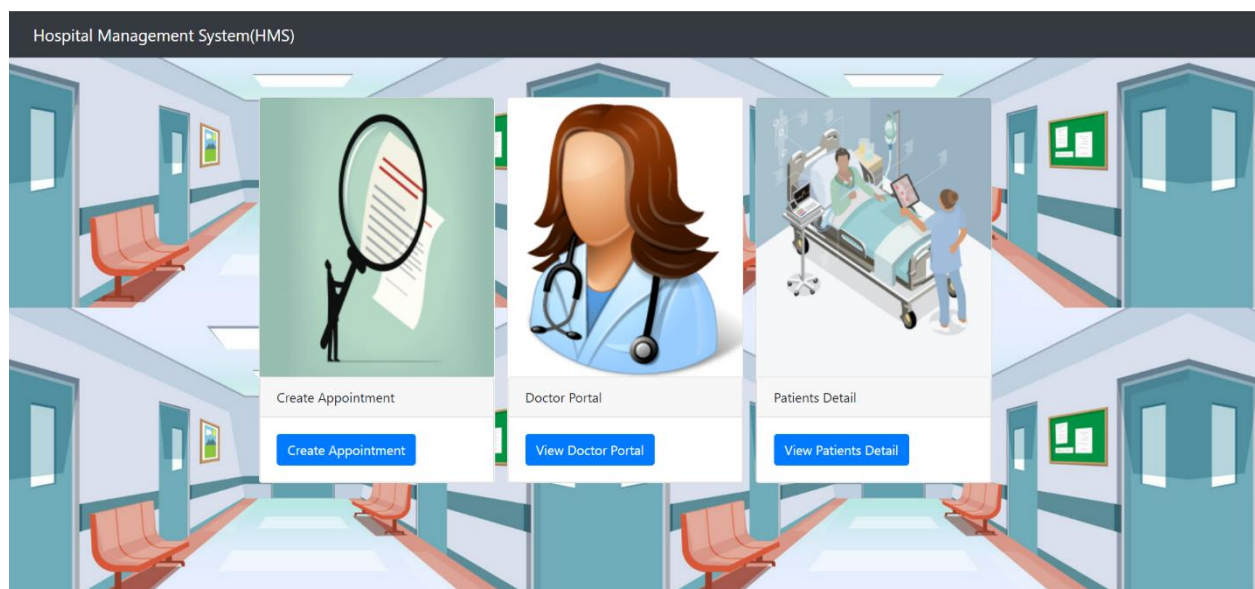

Deliverable Table	Description	Status
1. Front End	Make a responsive website using HTML, CSS, Bootstrap, Javascript that everyone can easily use it.	Done
2. Back End	Use Back End tools php, javascript, java,database such a way that any future changes can easily be managed	Done
